STATINTL

Attached is the Les Dirks' memo to Evan Hineman requesting a short briefing on SAFE with concentration on requirements development within NFAC, followed by a brief review of the current status. I have been in touch with [redacted] the Executive Officer of DDS&T, who has tentatively scheduled this briefing for 1100 on 23 May in Room 6E60. A list of the Panel members is also attached. As you can see, many of them have had long years of association with the Agency.

STATINTL

I suggest the format of the briefing be about 40 minutes by [redacted] describing how the various requirements for the Project surfaced and were identified followed by a 20 minute presentation by Vaughn on the current status of the Project.

STATINTL

I recommend that you two get together on format and that we meet sometime prior to the 23rd to discuss the briefing in more detail. If you have any questions, please call. [redacted] has indicated that he will be in touch with me to give a more definite time. I will keep you informed.

MEMORANDUM FOR: Deputy Director, NFAC

FROM : Leslie C. Dirks
Deputy Director for Science & Technology

SUBJECT : Panel Meeting

25X1A

25X1A

Evans?

1. The Panel will be meeting on the 22nd and 23rd of May in 6E60. Don has indicated that he would like an hour or so on Project SAFE. He said he was particularly interested in the requirements for SAFE as they have been developed over the years by NFAC. Also, he would like to hear a brief review of the current status of SAFE, however, Don left a clear impression that the emphasis was to be on the requirements for SAFE and the substantive gains you anticipate in the production environments when SAFE is operational. I am sure Don would be quite happy to talk to you personally if you would like any further elaboration. Also, indicated when I talked with him last week that he intended to call you or Bruce some time this week.

25X1A

2. The full day on the 22nd of May will be concerned with the CIA R&D program. The morning of the 23rd will be split between a review of the IR imagery flight test program and SAFE. Don indicated that it would be useful to hear from NFAC on the IR imagery capability with particular emphasis on the utility of that class of imagery as measured against current and anticipated intelligence problems from the NFAC standpoint. I have asked OD&E to structure the IR imagery presentation to include a half-hour from NFAC officers on the subject of utility.
